

Vladimir Stepanov | Frontend Developer

<https://t.me/hartaithan> · stepanov.vladimir.in.re@gmail.com · <https://hartaithan.github.io> · Russia, Yakutsk

About

Frontend developer with 5+ years of commercial experience in React, TypeScript, and Next.js. I design SPA and SSR application architecture from scratch, build UI kits, complex dynamic forms, and third-party integrations (telephony, maps, CRM). Took a product from idea to production as the sole frontend developer. Led a team of 2 junior developers: code review, mentoring.

Skills

Languages & Technologies: JavaScript, TypeScript, HTML, CSS, SCSS

Frameworks: React, SPA, Next.js, SSR, React Native

State & Data: MobX, Redux, Redux Toolkit, React Query

Work with API: REST API, Axios, GraphQL, Apollo Client, WebSocket

Forms & Validation: React Hook Form, Formik, Zod, Schema-driven forms

UI & Styling: Mantine, Bootstrap, Tailwind, Storybook, Responsive design

Maps & Visualization: VK Maps, Yandex Maps, Recharts, Tiptap

Testing: Vitest, Jest, React Testing Library

Tools: Git, Webpack, Vite, ESLint, Prettier, Figma, Docker, Sentry, Intercom

CI/CD: GitLab CI, GitHub Actions

Foreign Languages: English - B1

Experience

Dvigus Frontend Developer

October 2023 - present

PropTech, real estate matching

Stack: React, TypeScript, MobX, React Hook Form, Mantine, VK Maps, Recharts, Tiptap

- Designed the architecture and developed two frontend applications for a real estate matching management system from scratch — one for operators and one for content managers. As the sole frontend developer, I was responsible for the entire frontend stack and for building a shared UI kit based on Mantine.
- Consolidated 3 previously separate services into a single operator application, simplifying and speeding up the workflow and removing tool-switching for ~20 operators.
- Delivered seamless telephony widget integration into the operator interface: initiated an expansion of its public methods with the vendor - without this the widget's full functionality couldn't have been embedded in our app.
- Worked with the telephony service team to identify and document 10+ widget bugs, improving its stability and preventing issues in our application.
- Integrated external data sources (UIS, CIAN) and an automated dialing service, ensuring stable operation of key call center processes.
- Designed complex dynamic forms: the set of fields and validation rules is determined by the object type.
- Optimized application performance (Code splitting, Lazy loading): reduced the initial bundle size by 58%. Migrated the project from React 18 to React 19.
- Introduced unit and integration testing (Vitest, React Testing Library), ~40% coverage of key modules; set up a CI pipeline (linting, tests, build) in GitLab CI.

Qwantum Frontend Developer

June 2022 - August 2023 (1 year 1 month)

C2B2C beauty services platform

Stack: React, Next.js, React Native, Redux, React Hook Form, Apollo Client, Mantine, Sentry, Intercom, Yandex Maps

- Made key frontend architecture decisions, ensuring a unified approach to web and mobile development.
- Built the client and business sides of the platform: web and mobile apps (Next.js, React Native) for the client side of the platform.
- Grew from sole frontend developer into leading a team of 2 junior developers: code review, mentoring, task distribution.
- Integrated Sentry for error monitoring and Intercom for user communication.

AEB IT Frontend Developer

May 2021 - May 2022 (1 year)

Regional medical portal

Stack: React, Next.js, TypeScript, Redux, Formik, Bootstrap, Lottie, Yandex Maps

- Implemented a subdomain architecture for 30+ medical organizations' websites: each organization gets its own site with a configurable page structure and theme.
- Built an admin panel for managing content and site structure without developer involvement.
- Developed complex forms, drag-and-drop interfaces, WYSIWYG editors, and Yandex Maps integration.
- Rewrote the legacy object map page (point filtering, clustering) from Class Components to Hooks.
